I am pleased to present the 2018 annual report.

With your strong support, the Friends of UTokyo scholarship programs are steadily expanding and have shown great progress and results again this year. Even in these politically and economically uncertain times, the quality and numbers of the recipients are looking greater, which brings us a great joy and encouragement.

I often hear from western scientists visiting Japan on a research exchange that they are impressed by the beauty and cleanliness of Japanese cities. Through my interactions with students through Friends of UTokyo and the Princeton University-University of Tokyo exchanges, I feel that Japan is becoming increasingly attractive as I hear more and more students expressing their desire to study in Japan and experience life in Japan. Shifting the focus of Japan’s young generation to a global view is of utmost importance, and I sense that these foreign exchanges in the long run will have an immeasurable effect. It is my hope that discovering and nurturing distinguished future global leaders will in turn give strength to FUTI.

Finally, I would like to express my deepest gratitude to our donors for their very generous support and continued endorsement of our organization.

Masaaki Yamada
President
Friends of UTokyo, Inc.
Under the Global Leadership Program, FUTI provided scholarships to UTokyo students planning to study in the U.S. and U.S. students intending to participate in an internship or study at the UTokyo. Most donations came from alumni and Shintech, Inc.

In 2018, FUTI received 21 applications from UTokyo students applied and awarded six scholarships. Ever since UTokyo’s academic calendar switched to the quarter schedule, the quality and quantity of students applying to FUTI summer scholarships has seen some change due to summer programs at U.S. universities overlapping with UTokyo’s second quarter-end exams. Thus, FUTI’s support of UTokyo students since 2016 has been on a continuous decline, but it is our hope to overturn this trend.

On the other hand, there are several promising prospects as well. One, the UTokyo’s study abroad support system has become significantly expanded. Students no longer need to find study abroad summer programs or places to stay on their own, and do not need to deal with foreign universities before deciding on the program. Students can simply apply for the “packages” that UTokyo provides and pass the in-school selection process. However, since the scholarship provided by the study abroad system is not enough to cover all expenses, FUTI provides support to selectively distinguished/exceptional students by awarding almost equal the amount.

Two, applications from GEfIL (Global Education for Innovation and Leadership) students remain active. Participating in a study abroad during the summer semester of the third and fourth year is a requirement for GEfIL students. The program offers its own scholarships, primarily supported by corporate donations, but with such high tuition and cost of living in the U.S., those wishing to study in /American universities are encouraged by GEfIL to apply to outside funding sources including FUTI scholarships. In this fiscal year, FUTI has provided scholarship to two students to participate in a summer study abroad at Harvard and Yale.

Three, in 2018, FUTI awarded a Global Leadership Award to a student in the School of Medicine for the first time. In the final year of the six-year medical program at UTokyo, there is a requirement to participate in a Clinical Clerkship for a month around April or May. Some aspire to do their field practice at a university hospital in the US and requested support from FUTI. Without any academic calendar conflicts mentioned above, it is likely that applications for these cases will increase.

Contrary to the situation of UTokyo applicants as mentioned above, the interest of students currently studying in US universities wishing to attend a summer program at the University of Tokyo remains strong and there is a high demand for funds. In FY 2018, FUTI received 54 applications for summer scholarships and 12 were awarded. The following scenario contributes to the reason for such a high demand.

University of Tokyo provides physics and engineering internships such as UTRIP (University of Tokyo Research Internship Program), UTSIP-Kashiwa (the University of Tokyo Summer Internship Program in Kashiwa), and ESEP (Engineering Summer Education Program). These programs provide an opportunity for distinguished undergraduate students not only in the US but all over the world to take part in these summer workshops and hopefully continue their studies as a graduate student at the University of Tokyo. Although UTokyo are prepared to take on all costs including living costs, FUTI further supports the university and selects outstanding students by providing scholarship to cover either all costs or expenses other than room fees. A great number of applications are received from across the globe in this category, predicting an increase in the future. Even though the number of applications from US students is still high, an increase is not anticipated from this group.

The State of California is expanding the University of California Education Abroad Program (UCEAP), which includes summer programs abroad. In FY 2018, FUTI received eight applications, of which two were awarded with a scholarship to participate in the physics/engineering internships.

Several U.S. applications are from students affiliated with the UTokyo's new international collaboration, the IRCN (International Research Center for Neurointelligence) established in 2017. Professor Takao Hensch of Harvard University is the director of IRCN, furthering the cooperation between Harvard and UTokyo. As plans of student exchanges between Harvard and UTokyo developed, FY 2018 saw the first of these exchanges with six Harvard undergraduate students (+ one Japanese student from Utrecht University) attending a summer internship at UTokyo. Four of the Harvard students applied for a FUTI scholarship and three were awarded. Two-way student exchanges are planned for 2019 and strong demand may be anticipated in the future.

We believe that the summer leadership program meets FUTI's objective to “globalize UTokyo” in multiple ways. Most US interns supported by FUTI work in laboratories at the UTokyo closely interacting with their staff and students, exposing them firsthand to cross-cultural experiences. At the same time the reports of UTokyo students who participate in summer programs at US universities reveal that many of them came away from the experience with much stimulation, expanded view, and a sense of maturity that one could not have imagined before studying abroad.
Roster of Global Leadership Award Recipients, 2018

*All information listed are based on data collected at the time of application

Sarim Abbas  
Yale University  
Sophomore  
Computer Science  
Global Summer Program at University of Tokyo

Michael Hong  
University of California, Berkeley

friendsofutokyo.org/roster
Using a contribution from the Ito Foundation U.S.A., the Ito Foundation U.S.A.-FUTI scholarship started in 2016 to support mid-to long-term study of one or more semesters at a U.S. university for students and alumni of the University of Tokyo. A condition of the selection is that the applicant has demonstrated a promise of contributing to Japanese society. Many award recipients have completed undergraduate/previous work at a university other than UTokyo in Japan and a few, at foreign institutions. Mr. Ito, an honorary chairman of Seven & I Holdings, is President of the Ito Foundation U.S.A.

We received 33 applications for the program this year and awarded 12 scholarships which included three continuing from the previous year. With the exception of one U.S. student who planned to study at UTokyo, they were all UTokyo students. The latter were enrolled in Harvard, MIT, Yale, New York State, Princeton, Chicago, Tulane, University of Washington, and University of California at Berkeley (3 students). The pool contains one undergraduate, four master’s students, two students who are currently in a master's program but moving to a doctoral program, and four students who already in a doctoral program. Since the UTokyo's study abroad program is not designed to assist doctoral students, FUTI's program which support many doctoral students uniquely meet their unmet needs. Their majors include political science (3), international relations (2), economics, literature, physics, health policy, environment and conservation (2).

For the first time in 2018, we offered the "IF Scholarship" after considering the intention of the Ito Foundation U.S.A. It is designed to support students who have demonstrated an unusual strength of character even though, due to extensive extracurricular activities and other circumstances, whose English proficiency and academic performance may be somewhat limited. In the selection process of this program, FUTI considers the English proficiency and academic performance only to determine if they are sufficient for undertaking the intended study in the U.S. This award is open to students of UTokyo and other institutions in Japan. This year we awarded one scholarship in this category to a UTokyo student who had been very active in extracurricular activities. We plan to evaluate the merit of this program focusing on award recipients' performance in this and future years.

We believe that we have managed to select outstanding award recipients from UTokyo students and alumni, judging from their reports on various accomplishments in work and academia (including publications and presentations). We have a high expectation for their further advancement and contribution to society.

---

**Roster of Ito Foundation U.S.A.-FUTI Scholarship Recipients, 2018-2019**

**Megumi Asaba**
University of Tokyo, Master’s Program
Graduate School of Medicine, International Health, 2012
Tulane University, School of Public Health and Tropical Medicine, Global Community Health and Behavioral Sciences, Doctoral Course

**Shusei Eshima**

We have a high expectation for their further advancement and contribution to society.
I. Cooperative Research and Education in Frontiers of Condensed Matter Physics
(PI: Y. Uemura, Columbia University)

Since FY 2012, Friends of UTokyo, Inc. (FUTI) has provided grants every year to the international and cooperative research and education activities at UTokyo and Columbia University in the area of Condensed Matter Physics (CMP). During the 2017 Fall to 2018 Summer period, based on support from FUTI, Prof. Uemura organized a combination of activities of global education and focused research collaboration for graduate students of University of Tokyo and Columbia University, in cooperation with faculty and staff members from the universities and other leading scientists.

In the Fall 2017 semester, Prof. Uemura obtained a Visiting Professorship of École Polytechnique in France, supported by the Alliance Exchange Program, and stayed in Paris from September 2017 to January 2018. During this time, in collaboration with several French scientists, he organized the FCMP (Frontiers of Condensed Matter Physics) lecture course at the Columbia University Global Center (CUGC) in Paris and École Polytechnique in Palaiseau. The live lectures were attended by senior scientists, postdocs and graduate students from École Polytechnique, U Paris-Sud Orsay, CEA Saclay, ESPCI, College de France, U Paris Diderot, UPMC, and CNRS-Thales, and most of the lectures were simulcast to Columbia University and Rutgers University in the US, PSI in Switzerland, and Max Planck Institutes in Hamburg and Dresden. The simulcast at Columbia was organized as a credit-granting graduate course, enrolled with 21 graduate students, while videos will be used in seminars at Tokyo University. Lecturers of Paris FCMP included four eminent professors from Japan.

Prof. Uemura organized an FCMP Workshop at Frascati near Rome on June 11-15, 2018, joined by 80 invited speakers among leading CMP scientists and 40 graduate students from Europe, US, Japan and China. Invited speakers included five professors from UTokyo, one from RIKEN and one from Kyoto University. FUTI's grant for FY 2017-18 was used to support travel and other costs of two UTokyo graduate students and several students participating in the Frascati program.

In June, 2018, a Columbia grad student visited the Advanced Science Research Center of Japan Atomic Energy Agency (JAEA) in Tokai to work on the growth of single crystals of BaCoS2 under supervision of Dr. Shamoto, who is a seasoned senior researcher. In July, 2018, the two Columbia students stayed in Tokyo, and worked with the two experienced UTokyo graduate students (who were also at Frascati) to grow high quality single crystals of FeSe, under the supervision of Prof. Shibauchi of the Dept. of Graduate School of Frontier Sciences of UTokyo, Kashiwa Campus. In August of 2018, the two UTokyo graduate students visited the Canadian National Accelerator Facility TRIUMF in Vancouver, where they worked for two weeks in Muon Spin Relaxation studies of FeSe crystals grown in UTokyo together with Dr. Uemura and two Columbia students who are well-versed in the subject. The FUTI grant supported travel expenses of these UTokyo and Columbia students.
II. Yale-UTokyo Exchanges

Yamakawa Kenjiro Memorial Lecture Travel Grant
Prof. N. Hiwatari (PI)

During FY2017-18, FUTI supported the Yamakawa Kenjiro Memorial Lecture series for the second year. A grant (in the amount of $7000) supported two Yale faculty members’ travel to UTokyo where they gave lectures. This year, each speaker was invited to give two talks, one held at Hongo campus and the other at Komaba campus.

In May 2018, the 11th Yamakawa Kenjiro Lecture was delivered by Professor Steven Smith, a leading scholar in the field of political philosophy, holding the Alfred Cowles Chair in the Political Science Department at Yale. Professor Smith gave his first talk at the Komaba Campus entitled “Political Philosophy and the Dark Arts.” His second talk, for specialists of political philosophy, was on the topic of “Machiavelli’s Utopianism.”

Professor Fredrik Sävje, a new arrival at Yale and a rising star in the field of political methodology and statistics, was the speaker of the 12th Yamakawa Kenjiro Lecture. At the Hongo campus, he discussed “Average Treatment Effects in the Presence of Unknown Interference” with an audience of methodologists from Faculty of Economics and Faculty of Law. His second lecture about the philosophical problems of causal inference, “Causality and Data,” was attended by faculty members and junior scholars, as well as advanced undergraduates.

The Yamakawa Kenjiro Lecture series aims at strengthening academic ties and exploring new research collaborations between the UTokyo and Yale University. The speakers introduced cutting-edge research in their respective field for the audience consisting mainly of academic specialists and gave a more general talk discussing the current topics in the field of research to a broader audience.

FUTI Lecture Series

The objectives of the FUTI Lectures Series is to provide UTokyo alumni and others with an opportunity to explore, challenge and debate salient issues with visiting UTokyo scholars and distinguished alumni in an informal setting. The events generally take place in a mid-Manhattan location.

The annual fundraising campaign for FY 2017/18 (July 1, 2017 to June 30, 2018) concluded with a total revenue of about $313,000. The total donation FUTI received amounted to $199,000 in FY2016/17, $316,000 in FY 2015/16, $116,000 in FY 2014/15, $110,000 in FY 2013/14, and $131,000 in FY 2012/13. The substantial increase in FY2015/16 is attributable to the large gift from Ito Foundation U.S.A. which started in that year.

The grant from the Ito Foundation U.S.A. was the largest component of the revenue. This grant is used for scholarships awarded to current students and graduates of UTokyo who intend to study in the U.S. for one semester or longer. We received $200,000 in FY2015/16, $110,000 in FY2016/17, and $216,000 in FY2017/18. The second largest contribution was the trust distribution from Shintech, Inc. which is primarily applied to fund FUTI Global Leadership Awards. In accordance with the 5-year agreement with the company which was renewed in FY2014/2015, we received about $35,000 this year. We sincerely appreciate the generosity of Shintech, Inc. over the many years.

The number of individual donors (“general public” or “non-corporate” in the chart) was 68 in this fiscal year. This is within the range of 60-70 donors attained in recent years. Even though no individual gave in excess of $10,000 this year, the total individual donation reached $62,000, which is $8,000 greater than the last year, thanks to the several donors who increased their gift amounts this year as they understood the critical importance of individual donations in FUTI’s fundraising effort. There is an urgent need to develop a new group of donors to sustain FUTI’s future.

We are sincerely thankful to Ito Foundation U.S.A. and Shintech, Inc. for their generous support of FUTI’s mission. In order for FUTI to continue the current level of activities, FUTI must raise sufficient funds from individual donors. We thank each and every one of our donors for his/her generosity and urgently request their continued support.

Over the past several years, we have made great strides to develop our programs. We are pleased to see the growth of our scholarship and research grant programs as well as the educational endeavors made by our scholarship and grant recipients. It will be greatly rewarding for us to see UTokyo increase its presence in the global community, which is becoming more and more competitive with many other well-recognized universities across the globe. We are enormously grateful for your support of FUTI, which enables us to provide many highly qualified students with an opportunity to study abroad.
